Ronald J. Henke, P.E.

**PLANNING/ASSET MANAGEMENT DIVISION**

SCOTT D. ZAINHOFSKY P.E.

April 2024

## INTRODUCTION

This report contains summary information of the pavement condition data collected in the fall of 2023. It is a compilation of information related to the pavement distress, IRI, traffic volumes, and construction history, of the North Dakota state highway system for the District referenced on the cover. Much of the data is presented in a more general form than its original source. While more detailed information can be obtained by going directly to individual files, this report provides an accurate overall picture of the state highway system for the referenced District. Similar books are available for the other 7 Districts.

### PAVEMENT MANAGEMENT CONDITION RATINGS

Category	Distress	IRI (in/mile)	Rut (in)
Excellent	>=97	0-60	<0.25
Good	91-96	61-99	0.25-0.37
Fair	84-90	100-145	0.38-0.50
Poor	<84	>145	>0.50

### DISTRESS SECTION RANKING

This section contains a ranking of all highway segments for the District sorted by distress score from worst to best. Automated "scoring" is done to arrive at a distress score. A distress score of 99 is the starting point and describes a pavement with no distresses. Deduct values are assigned to distresses and are subtracted from 99 to arrive at a distress score. The lower the distress score, the worse the pavement distress condition. Sections that were not scored will have a N/A in the distress score column.

### IRI SECTION RANKING

This section contains the ranking of all highway segments for the District sorted by the International Roughness Index (IRI) from worst to best. The IRI is a measure of pavement smoothness that is calculated from the longitudinal profile of the roadway surface. The higher the IRI, the worse the pavement surface smoothness. Sections that were not scored will have a N/A in the IRI column. The IRI category ranges were modified in fall 2008.

### MAINTENANCE SECTION RANKINGS

\*\*Due to software changes to the maintenance data system in 2004, we are not able to query this data at this time\*\*

### MISCELLANEOUS INFORMATION

Starting with data collected in 2018, the distress scores were calculated with a new method. The changes to distress scoring were:

- Microsurface and Thin Lift Overlay projects are reset to a distress score of 99 (if no cracking is visible) rather than the previous method of being assigned a 6 point patch score.
- Distresses are based on the percent severity of each type of distress within each mile rather than the worst severity of each distress for each mile.

Starting in 2018, the faulting was collected using the 3D system on the data collection vehicle.

Starting in 2013, pavement distress data was collected using Pathway Service's 3D automated crack detection and analysis system. The automated 3D system scores the entire mile rather than the first tenth of a mile as previously scored. NDDOT's existing distress deduct values were used with the 3D system.

As stated previously, the IRI ranges were modified in fall 2008. The following chart shows the history of the IRI ranges, since there was also a revision to the IRI ranges in 2004. This is provided for informational purposes only. Any past IRI value can be compared to the current ranges.

Category	2003 & earlier IRI Ranges	2004-2007 IRI Ranges	Current IRI Ranges (adopted 2008)
<b>Excellent</b>	0-60	0-80	0-60
<b>Good</b>	61-95	81-129	61-99
<b>Fair</b>	96-132	130-177	100-145
<b>Poor</b>	>=133	>177	>145

The following scale is used to categorize average rut.

Category	Rut (in)
<b>Excellent</b>	<0.25
<b>Good</b>	0.25-0.37
<b>Fair</b>	0.38-0.50
<b>Poor</b>	>0.50

Average rut (inches) is calculated as the average of the raw rut data collected for the mile. The rut deduct used in the distress score is arrived at by a severity analysis. The category, from the rut scale above, with the worst 20% of the values is used to assign the deduct.

PRPI and Ride scores are listed in this document; however, pavement management is no longer using these measures to describe ride quality. Refer to the IRI score and the IRI ranges to describe ride quality.

### On Line

All data found in this book is easily accessible and in more detail through the mainframe database. Contact the RIMS coordinator in your district or division or the Pavement Management Section of Planning/Asset Management Division if you need help in using the mainframe.

NOTE: SEGMENTS SHOW ASPHALT-SURFACED ROADS ONLY.

PROJECT SPECIFIC CONSTRUCTION, TRAFFIC, PAVEMENT  
DATA, AND PAVEMENT CONDITION DATA

The various fields of information and their sources are as follows:

**D** – District

**HWY** – Highway

**S** – Suffix (900 mileage will have a B here for business loop)

**D** – Direction

**FROM REF PT** – Reference point defining start of a segment

**FROM OFFSET (MI)** – Distance from a reference point, defining start of a segment

**TO REF PT** – Reference point defining end of a segment

**TO OFFSET (MI)** – Distance from a reference point, defining end of a segment

**LENGTH** – Length of a segment

**LEFT SHLDR WIDTH** – Left shoulder width

**DRIVING LANE WIDTH** – Driving lane width

**RIGHT SHLDR WIDTH** – Right shoulder width

**SURF DPTH** – Total pavement depth

**BASE DPTH** – Total base depth

**GRAD WDTN** – Graded width of section below base

**FIN WDTN** – Finished width of section below pavement

**TAADT** – Truck Annual Average Daily Traffic

**AADT** – Annual Average Daily Traffic

**ESALS** – Equivalent Single Axle Loads (18 kip)

**PAV AGE** – The number of years since last (20 year design life) rehab

**EFF PAV AGE** – The effective age of a pavement based on the design life of the last rehabilitation. See examples #1 and #2 on following pages.

**LAST YEAR SEAL** – The last year this segment was sealed

**PVMT TYPE** – Flex for asphalt, Concr for concrete, and Compo for composite pavement of asphalt over concrete or concrete over asphalt

**PVMT DESC** – If PVMT TPE is Flex then PVMT DESC will be asphalt, if PVMT TYPE is concr then PVMT DESC will either be CRCP or jointed, if PVMT TYPE is compo then PVMT DESC will be AOCRC (asphalt over CRCP), AOPJC (asphalt over jointed), AOB&S (asphalt over break and seat), AOC&S (asphalt over crack and seat), or PCCOA (concrete over asphalt)

**HWY PTY SYS** – RI (rural interstate), UI (urban interstate), RIC (rural interregional corridor), UIC (urban interregional corridor), RSC (rural state corridor), USC (urban state corridor), RCR (rural district corridor), UCR (urban district corridor), RCL (rural district collector), UCL (urban district collector), RCN (rural district collector on the National Highway System)

**INTL CONS** – Year of first construction

**PREV CONS** – Year of first rehabilitation

**LTST CONS** – Year of most recent rehabilitation

**LTST REHAB** – Type of latest rehabilitation (overlay, CPR, seal, etc...)

EXAMPLE # 1

All asphalt pavement life is based on a 20 year design. All concrete pavement life is based on a 30 year design life unless otherwise noted.
